PCB Layers

- There is a capacitance between I/O pads and reference ground which can affect the DR filter's performance.
- Keep a distance over **0.5mm** between I/O pads and reference ground to avoid large capacitance.

- Clearance area location in L2 (4- & 6-layer PCB) and L3 (6-layer PCB) is directly under top layer clearance area, and the size is the same.
- Reference ground under DR filter should avoid fragmented plane.
