Johanson Technology, Inc. (JTI) miniature RF ceramic chip antennas are made using Low Temperature Co-fired Ceramic (LTCC) technology which has the ability to embed low and high dielectric constants inside our antenna. This enables our components to have high detuning resilience and stability over extreme temperatures (~2ppm).

All units in mm

2450CH15A0100002E can be placed in the same plane as 2440AT62B0085002U

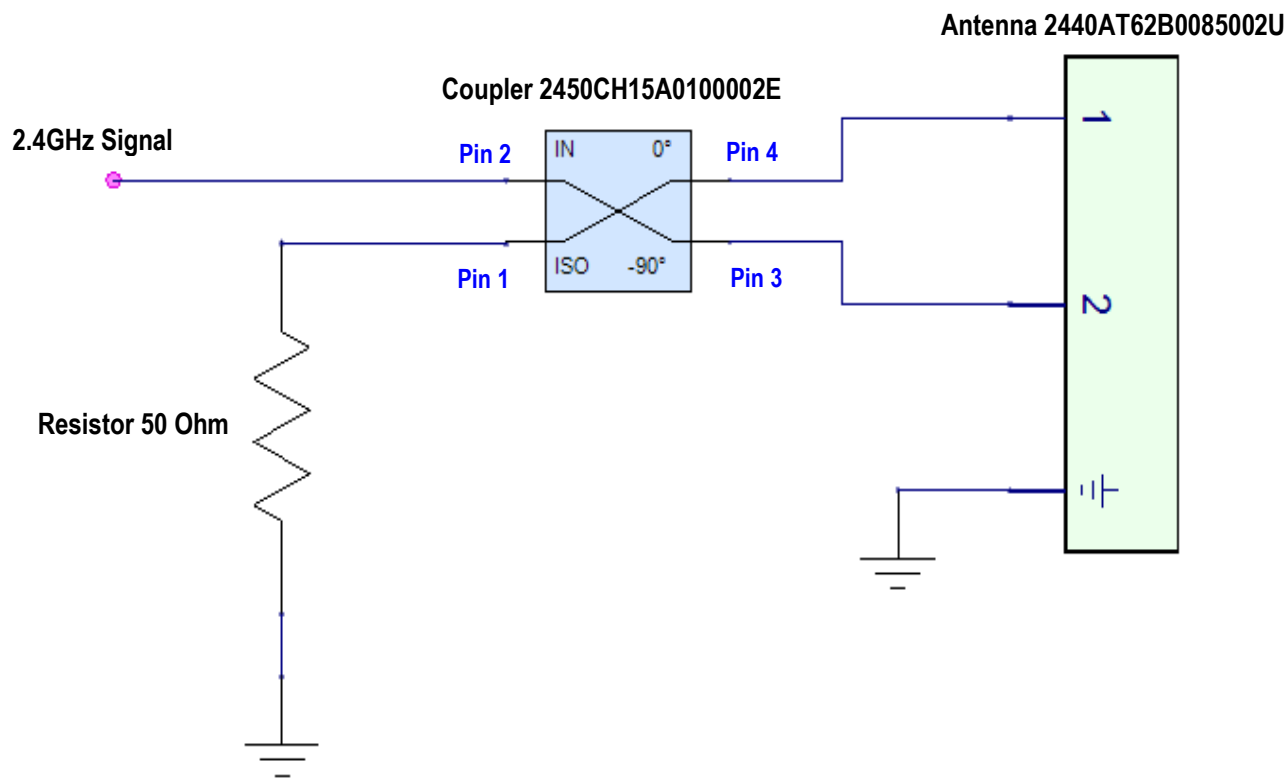

*Note: To minimize axial ratio, this patch antenna is designed with dual-feed inputs 90° apart in phase. Johanson Technology's hybrid AEC coupler 2450CH15A0100002E provides this and is the recommended solution for this purpose when chipset is single feed.
